DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,2,4-12,14 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 11, from which the other claims depend, claim that the heart stabilizer is held without actuation of any fasteners. In applicant's invention one must actuate the spring biased end effector to hold the stabilizer in place. The spring jaw of applicant's invention is seen as a fastener which must be actuated to fasten the stabilizer in place.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1,2,4-12 and 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dobrovolny et al in view of Green et al and Jackson.

Dobrovolny et al discloses applicants' basic inventive concept, an apparatus for attaching a surgical device to a surgical table having three arms and pivoting connectors with locking knobs between each arm, substantially as claimed with the exception of using an end effector which uses a spring biased jaw member to releasably clamp a heart stabilizer which is held in place without the use of fasteners. Green et al, specifically figure 20 and the associated discussion at the top of column 21, show this feature to be old in the surgical device supporting system art. Jackson shows clamps with means to adjust the spring force. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention from the teaching of Green et al and Jackson to modify the surgical device support of Dobrovolny et al by using a spring biased jaw device with an adjustable spring force to hold a heart stabilizer to permit the movement of the device to any position so that the heart will not move and the stabilizer will be held out of the surgeons way as much as possible. In regard to claim 19 and 20, it is noted that either one or two people may adjust the position of either the device of Dobrovolny et al or Green et al and as such, such a use would have been obvious to an ordinary practitioner in the art.

Response to Arguments

It is noted that Green et al state in column 21 lines 1-4, "The amount of force is selected to allow instrument shaft 3 to be easily positioned by hand but would generally not allow instrument shaft 3 to slide relative to shaft grip 140 under only its own weight." This is seen as holding the stabilizer in place without the use of fasteners. This is also seen to teach the releasable jaws as claimed in claim 16 with parts 144 and 137 as shown in figure 19 forming the releasable jaws.
